

Every tumour in the analysed arms, on both platforms. Bars are medians.

PRMT5 methylosome — GSE24369 / GPL6244

MTAP / CDKN2A / CDKN2B locus — GSE24369 / GPL6244

PRMT5 methylosome — GSE4303 / GPL3290

MTAP / CDKN2A / CDKN2B locus — GSE4303 / GPL3290

The two platforms are not on a shared axis: one is single-channel intensity, the other a two-colour log-ratio.  
A gene with no probe is marked unreadable, which reflects the instrument rather than the absence of expression.  
Five deposited solitary fibrous tumours are not in the analysed arms and are drawn in figure 4.
