

GSE24369 / GPL6244 - each comparator class separately

NOTE LGFMS is FUS::CREB3L2 - a FET-fusion sarcoma, and therefore a control for 'this is just what a fusion sarcoma looks like'.
Pooled, EMC does not separate from desmoid fibromatosis; PRMT5 alone does. Route 1 depends on PRMT5, not on the group.
Left-panel points are gene-by-sample values pooled across four genes, so they are not independent observations and no test is run on them.
