

GSE24369 / GPL6244 - each comparator class separately

Methylosome, four genes pooled: EMC ranks second

PRMT5 alone: EMC is highest

LGFMS carries FUS::CREB3L2 and is therefore a within-class control for a FET-fusion sarcoma.

Pooled, EMC does not separate from desmoid fibromatosis; PRMT5 alone does. Route 1 depends on PRMT5, not on the group.

Left-panel points are gene-by-sample values pooled across four genes, so they are not independent observations and no test is run on them.
