

EWSR1, 656 aa — 11 GRG sites (red), first at 301; RGG-rich regions shaded

wild type

*no GRG site in residues 1-300
(the segment every fusion retains)*

EWSR1::NR4A3 type 1

EWSR1::NR4A3 type 2

EWSR1::NR4A3 type 5

EWSR1::FLI1 (Ewing, type 1)

EWSR1::ATF1 (clear cell, commonest type)

NOTE: EWSR1::FLI1 keeps 0 sites and PRMT5 inhibition is still fusion-dependent there.
The motif is NOT required, and this figure is not a response predictor.
