

Every tumour, per gene and per comparator stratum

Horizontal bar = arm mean. Each point is one tumour. The two platforms measure different quantities and are never pooled.

within-array z (probe distribution of that sample)

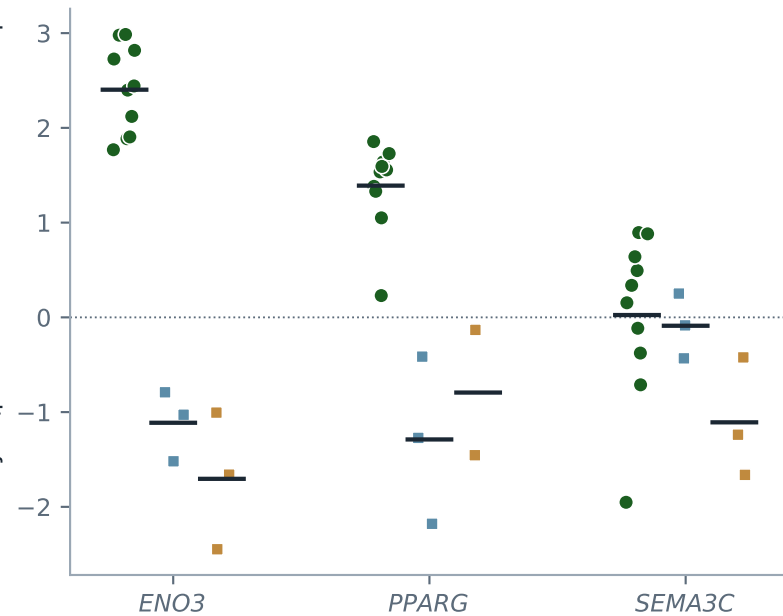

GPL6244 · single-channel intensity

- EMC
- desmoid fibromatosis (not myxoid)
- LGFMS (myxoid, FET-rearranged)
- myxofibrosarcoma (myxoid)

GPL3290 · two-colour log-ratio

within-array z (probe distribution of that sample)

- EMC
- DFSP (not myxoid)
- GIST (not myxoid, other ref. pool)
