

NR4A3 gapmer design depends on RNA join and register

PRIMARY CATALOGUE

38 modelled exon-3 joins
190 junction-spanning
16-nucleotide designs

ONE-BASE REGISTER SHIFT

TAF15 e6::NR4A3 e3
Centred: 9 bp (TFG)
Adjacent: 11 bp (NR4A3)

ADOPTED 10-bp CRITERION

Primary designs: 45.8%
Artificial joins: 40.6%
No EMC-specific excess

Exon-2 acceptors require different designs.

Patient-junction correspondence remains unresolved.

Sequence predictions only; cleavage and biological selectivity were not measured.
