

Independent instruments applied to the three published direct targets

Columns are NOT commensurable and no glyph is scaled by effect size. Colour encodes only whether that instrument supported the gene.

	GPL6244 array Δ mean $z \cdot BH\ q$	GPL3290 array Δ mean $z \cdot BH\ q$	each comparator stratum least favourable exact p	3SEQ cohort ratio $\cdot$ percentile of 14,120 genes	NBRE motif sequence, not occupancy	NR4A occupancy paralogue, vs 198-gene panel
<i>ENO3</i>	$\Delta+0.81$ $q=0.000438$	$\Delta+3.81$ $q=0.000625$	$p = 0.0216$ across 5 strata	$2.5315\times / 98.0^{th}$ $2.0152\times / 95.9^{th}$	4 exact sites $p=0.0345$	best $p = 0.0498$ of 8 experiments
<i>PPARG</i>	$\Delta+0.31$ $q=0.097$	$\Delta+2.48 \cdot q=0.000833$ circular — not a test	$p = 0.22$ across 5 strata	$1.415\times / 84.0^{th}$ $2.1189\times / 96.4^{th}$	3 exact sites $p=0.227$	best $p = 0.829$ of 8 experiments
<i>SEMA3C</i>	$\Delta+0.73$ $q=0.233$	$\Delta+0.62$ $q=0.165$	$p = 0.136$ across 5 strata	$1.8175\times / 94.2^{th}$ $1.6622\times / 92.6^{th}$	0 exact sites $p=1$	best $p = 0.293$ of 8 experiments

supported by this instrument not supported circular — scored on the data the claim came from not computable
