

NR4A3 junction gapmers: design does not establish discrimination

DESIGN

38 modelled in-frame junctions
190 junction-spanning 16-mers

PARENT PAIRING

87/190 designs (45.8%)
Full-gap pairing at adopted 10-bp cut

INTERPRETATION

Exon-terminus null: 40.6%
Disease-specific excess unresolved

10 bp is a screening convention, not a measured cleavage threshold

Patient junction and cell-model correspondence remain limiting.

Computational predictions only; no cleavage, efficacy or safety established.
