

MTAP, CDKN2A and CDKN2B, scored separately

GSE24369 / GPL6244

CDKN2A is lost by mechanisms that leave MTAP intact, so a locus-level score cannot distinguish co-deletion from CDKN2A-only loss. MTAP protein can, which is why the decisive test proposed for this route is a stain rather than an expression contrast.

GSE4303 / GPL3290
